

An aerial photograph of a lush green forest. A wooden canopy walkway with railings is visible, winding through the dense foliage. The walkway consists of several horizontal sections connected by diagonal supports, creating a zig-zag pattern across the tree canopy. The trees are tall and have thick, vibrant green leaves, creating a dense canopy. The walkway is made of light-colored wood and has metal railings for safety. The overall scene is a serene and immersive view of a tropical or subtropical forest from above.
